Sub:FET(Front End Technologies)

Branch: CBA

Batch:31

-----PRACTICAL 1-----

Objective:-

To create your personal portfolio. To create a personal portfolio page, you need to be proficient in HTML5 and CSS3. In this project, you will create a web page containing the standard information for a work portfolio, including your name and image, projects, niche skills, and interests.

Exercise:-

The portfolio page should have a header and footer section. The header section will include a menu highlighting your personal information, contact information, and work. You can place your photo at the top part of the page and include a short description of your professional career and interests. Below this description, you can add a few work samples. The footer section can contain your social media handles.

Source Code:-
